

New KNX Products

KNX Members have the opportunity to place two KNX product advertisements in each KNX Journal, which will be distributed to 80000 readers worldwide. It is therefore evident that the KNX Journal offers you as a member the best possible platform to promote new KNX devices. This is a free of charge service for all KNX Members.

What do we need from you?

The new KNX Standard or Universal presence detector impresses by excellent detecting properties for mounting heights up to 5 m, compact design with built-in bus coupling unit as well as by the capability of presence-based constant light control. The 360° detection angle may be divided into three 120° portions each that may be enabled individually. Additionally, the Universal device has five functional blocks that operate independently of each other and to which the three PIR sensors may be allocated. Each functional block may be configured as desired to be used as a presence detector, ceiling automatic switch, or in signalling mode. The unit may be optionally set up and operated using its IR remote control.
